Heterogeneous Wireless Access Networks: Architectures and Protocols

Heterogeneous Wireless Access Networks: Architectures and Protocols

Heterogeneous wireless networking, which is sometimes referred to as the fourth-generation (4G) wireless, is a new frontier in the future wireless communications technology and there has been a growing interest on this topic among researchers and engineers in both academia and industry. This book will include a set of research and survey articles featuring the recent advances in theory and applications of heterogeneous wireless networking technology for the next generation (e.g., fourth generation) wireless communications systems. With the rapid growth in the number of wireless applications, services and devices, using a single wireless technology such as a second generation (2G) and third generation (3G) wireless system would not be efficient to deliver high speed data rate and quality-of-service (QoS) support to mobile users in a seamless way. Fourth generation (4G) wireless systems are devised with the vision of heterogeneity in which a mobile user/device will be able to connect to multiple wireless networks (e.g., WLAN, cellular, WMAN) simultaneously. This book intends to provide a unified view on the state-of-the-art of protocols and architectures for heterogeneous wireless networking. The contributed articles will cover both the theoretical concepts and system-level implementation issues related to design, analysis, and optimization of architectures and protocols for heterogeneous wireless access networks.

From reader reviews:

Ronald Walker:

Book is to be different for every grade. Book for children right up until adult are different content. As we know that book is very important normally. The book Heterogeneous Wireless Access Networks: Architectures and Protocols was making you to know about other know-how and of course you can take more information. It is extremely advantages for you. The guide Heterogeneous Wireless Access Networks: Architectures and Protocols is not only giving you a lot more new information but also to get your friend when you sense bored. You can spend your personal spend time to read your reserve. Try to make relationship with all the book Heterogeneous Wireless Access Networks: Architectures and Protocols. You never experience lose out for everything should you read some books.

Denice Cooke:

Hey guys, do you really wants to finds a new book you just read? May be the book with the concept Heterogeneous Wireless Access Networks: Architectures and Protocols suitable to you? The book was written by well-known writer in this era. The particular book untitled Heterogeneous Wireless Access Networks: Architectures and Protocols is one of several books this everyone read now. That book was inspired lots of people in the world. When you read this book you will enter the new way of measuring that you ever know prior to. The author explained their thought in the simple way, thus all of people can easily to be aware of the core of this guide. This book will give you a great deal of information about this world now. To help you see the represented of the world in this particular book.

Cheryl Taylor:

Your reading sixth sense will not betray you, why because this Heterogeneous Wireless Access Networks: Architectures and Protocols publication written by well-known writer whose to say well how to make book that could be understand by anyone who all read the book. Written in good manner for you, still dripping wet every ideas and producing skill only for eliminate your own hunger then you still skepticism Heterogeneous Wireless Access Networks: Architectures and Protocols as good book not merely by the cover but also by the content. This is one e-book that can break don't judge book by its deal with, so do you still needing yet another sixth sense to pick this particular!? Oh come on your studying sixth sense already alerted you so why you have to listening to yet another sixth sense.

Mary Perry:

What is your hobby? Have you heard this question when you got scholars? We believe that that query was given by teacher for their students. Many kinds of hobby, Everyone has different hobby. Therefore you know that little person just like reading or as examining become their hobby. You should know that reading is very important in addition to book as to be the thing. Book is important thing to increase you knowledge, except your personal teacher or lecturer. You get good news or update in relation to something by book. Numerous

books that can you go onto be your object. One of them is Heterogeneous Wireless Access Networks: Architectures and Protocols.
