Similarity Search: 32 (Advances in Database Systems) Pavel Zezula, Giuseppe Amato, Vlastislav Dohnal, Michal Batko

The proliferation of information housed in computerized domains makes it vital to find tools to search these resources efficiently and effectively. Ordinary retrieval techniques are inadequate because sorting is simply impossible. Consequently, proximity searching has become a fundamental computation task in a variety of application areas. Similarity Search focuses on the state of the art in developing index structures for searching the metric space. Part I of the text describes major theoretical principles, and provides an extensive survey of specific techniques for a large range of applications. Part II concentrates on approaches particularly designed for searching in large collections of data. After describing the most popular centralized disk-based metric indexes, approximation techniques are presented as a way to significantly speed up search time at the cost of some imprecision in query results. Finally, the scalable and distributed metric structures are discussed.

From reader reviews:

Neil Turner:

Often the book Similarity Search: 32 (Advances in Database Systems) will bring you to the new experience of reading a new book. The author style to describe the idea is very unique. If you try to find new book to read, this book very suitable to you. The book Similarity Search: 32 (Advances in Database Systems) is much recommended to you to learn. You can also get the e-book through the official web site, so you can quickly to read the book.

Rachel Robertson:

Spent a free the perfect time to be fun activity to do! A lot of people spent their down time with their family, or their particular friends. Usually they performing activity like watching television, gonna beach, or picnic from the park. They actually doing same thing every week. Do you feel it? Would you like to something different to fill your own free time/ holiday? Could possibly be reading a book might be option to fill your cost-free time/ holiday. The first thing that you will ask may be what kinds of publication that you should read. If you want to attempt look for book, may be the guide untitled Similarity Search: 32 (Advances in Database Systems) can be excellent book to read. May be it could be best activity to you.

Troy Jones:

Your reading 6th sense will not betray an individual, why because this Similarity Search: 32 (Advances in Database Systems) guide written by well-known writer who knows well how to make book that can be understand by anyone who else read the book. Written with good manner for you, dripping every ideas and publishing skill only for eliminate your current hunger then you still doubt Similarity Search: 32 (Advances in Database Systems) as good book not only by the cover but also by content. This is one publication that can break don't evaluate book by its handle, so do you still needing yet another sixth sense to pick this specific!/? Oh come on your studying sixth sense already said so why you have to listening to one more sixth sense.

Peggy Nunes:

You are able to spend your free time to learn this book this book. This Similarity Search: 32 (Advances in Database Systems) is simple bringing you can read it in the park, in the beach, train in addition to soon. If you did not have much space to bring often the printed book, you can buy the particular e-book. It is make you much easier to read it. You can save often the book in your smart phone. Thus there are a lot of benefits that you will get when you buy this book.
