Carbohydrates: 2 (Methods in Plant Biochemistry)

Carbohydrates: 2 (Methods in Plant Biochemistry)

The series, **Methods in Plant Biochemistry**, provides an authoritative reference on current techniques in the various fields of plant biochemical research. Each volume in the series will, under the expert guidance of a guest editor, deal with a particular group of plant compounds. Each will describe the historical background and current, most useful methods of analysis. The volumes include detailed discussions of the protocols and suitability of each technique. Case treatments, diagrams, chemical structures, reference data, and properties will be featured along with a full list of references to the specialist literature.

Conceived as a practical companion to *The Biochemistry of Plants*, edited by P.K. Stumpf and E.E. Conn, no plant biochemical laboratory can afford to be without this comprehensive and up-to-date reference source.
