Understanding LTE with MATLAB: From Mathematical Modeling to Simulation and Prototyping

Houman Zarrinkoub

An introduction to technical details related to the Physical Layer of the LTE standard with MATLAB®

The LTE (Long Term Evolution) and LTE-Advanced are among the latest mobile communications standards, designed to realize the dream of a truly global, fast, all-IP-based, secure broadband mobile access technology.

This book examines the Physical Layer (PHY) of the LTE standards by incorporating three conceptual elements: an overview of the theory behind key enabling technologies; a concise discussion regarding standard specifications; and the MATLAB® algorithms needed to simulate the standard.

The use of MATLAB®, a widely used technical computing language, is one of the distinguishing features of this book. Through a series of MATLAB® programs, the author explores each of the enabling technologies, pedagogically synthesizes an LTE PHY system model, and evaluates system performance at each stage. Following this step-by-step process, readers will achieve deeper understanding of LTE concepts and specifications through simulations.

Key Features:

- Accessible, intuitive, and progressive; one of the few books to focus primarily on the modeling, simulation, and implementation of the LTE PHY standard
- Includes case studies and testbenches in MATLAB®, which build knowledge gradually and incrementally until a functional specification for the LTE PHY is attained
- Accompanying Web site includes all MATLAB® programs, together with PowerPoint slides and other illustrative examples

Dr Houman Zarrinkoub has served as a development manager and now as a senior product manager with MathWorks, based in Massachusetts, USA. Within his 12 years at MathWorks, he has been responsible for multiple signal processing and communications software tools. Prior to MathWorks, he was a research scientist in the Wireless Group at Nortel Networks, where he contributed to multiple standardization projects for 3G mobile technologies. He has been awarded multiple patents on topics related to computer simulations. He holds a BSc degree in Electrical Engineering from McGill University and MSc and PhD degrees in Telecommunications from the Institut Nationale de la Recherche Scientifique, in Canada.

From reader reviews:

Mildred Miller:

Nowadays reading books be a little more than want or need but also get a life style. This reading habit give you lot of advantages. Advantages you got of course the knowledge the rest of the information inside the book which improve your knowledge and information. The data you get based on what kind of book you read, if you want have more knowledge just go with education and learning books but if you want sense happy read one together with theme for entertaining including comic or novel. The Understanding LTE with MATLAB: From Mathematical Modeling to Simulation and Prototyping is kind of guide which is giving the reader unpredictable experience.

Debra Davis:

Typically the book Understanding LTE with MATLAB: From Mathematical Modeling to Simulation and Prototyping will bring one to the new experience of reading a new book. The author style to clarify the idea is very unique. In the event you try to find new book to study, this book very suited to you. The book Understanding LTE with MATLAB: From Mathematical Modeling to Simulation and Prototyping is much recommended to you you just read. You can also get the e-book from official web site, so you can quicker to read the book.

Jeremy Bedford:

Typically the book Understanding LTE with MATLAB: From Mathematical Modeling to Simulation and Prototyping has a lot of knowledge on it. So when you check out this book you can get a lot of benefit. The book was authored by the very famous author. Mcdougal makes some research just before write this book. This specific book very easy to read you can find the point easily after reading this book.

Beulah Chavez:

In this era globalization it is important to someone to receive information. The information will make professionals understand the condition of the world. The healthiness of the world makes the information quicker to share. You can find a lot of recommendations to get information example: internet, newspaper, book, and soon. You can see that now, a lot of publisher in which print many kinds of book. Often the book that recommended to your account is Understanding LTE with MATLAB: From Mathematical Modeling to Simulation and Prototyping this publication consist a lot of the information of the condition of this world now. That book was represented how does the world has grown up. The terminology styles that writer make usage of to explain it is easy to understand. Typically the writer made some exploration when he makes this book. Here is why this book ideal all of you.
